History

Today's numbers, also called Hindu-Arabic numbers, are a combination of just 10 symbols or digits: 1, 2, 3, 4, 5, 6, 7, 8, 9, and 0. These digits were introduced in Europe during the XII century by Leonardo Pisano , an Italian mathematician. Pisano was educated in North Africa, he later carried to Italy the now popular Hindu-Arabic numerals. Hindu numeral system is a pure place-value system, that is why you need a zero.

Before adopting the Hindu-Arabic numeral system, people used the Roman figures, which derived from Etruscan period.

The Roman Numeration is based on a system based on fives.

To write numbers the Romans used an additive system: V + I + I = VII (7) or C + X + X + I (121), and also a substractive system: IX (I before X = 9), XCIV (X before C = 90 and I before V = 4, 90 + 4 = 94). Latin numerals are still in used today!

Word list

exact = right or correct.

estimate = a guess that is almost right.

range = the smallest number, the largest number and all the numbers in between e.g. five to sixty degrees Celsius (5 $^{\circ}$ C-60 $^{\circ}$ C), the three to five group (3-5 year olds). The dash (-) between the numbers shows that it is a range

Watch - Observe

When do people in your workplace use exact numbers?

When do they guess or estimate the number?

When do you hear people use the term 'range'? What kind of range are they talking about?

For example:

- age range
- temperature range
- weight range.

When do we use it? Context

We use exact numbers when it is important to get it right:

- when it might affect a person's health or safety
- when we need to keep accurate patient notes and records

01234 56789

Your Doctor's

6th.

appointment is at

10am on Monday

- in patient notes and records
- making an appointment
- · writing down our work hours.

We estimate numbers when being a little wrong is not very serious.

We might estimate when we are:

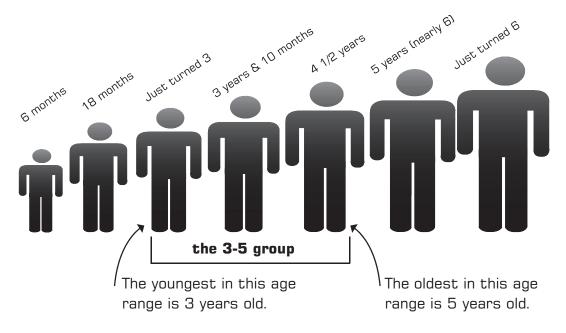

- working out how long a trip will take 'We'll be there in about two hours.'
- asking for supplies 'We need some cardboard to make posters for the clinic.'

History

In the past, people used lots of different ways to measure height and length. They might use the length of their thumb, the length of their arm or foot, the length of their step. This was not very exact.

Today, most countries in the world use exact measurements – like using centimetres or metres to measure length. In Australia, these units of measurement are called metric units.

We often **group** children by age. We might put all the three, four and five year old children into a group called the three to five year olds.

The rest of the group are all the children in between these ages.

Food needs to be kept in a safe temperature range.

In the fridge

Less than 5°C

Safe temperature

In the oven

More than 60°C

Safe temperature

On the Table

Between 5°C & 60°C

5°C - 60°C

Danger zone!

Getting something exactly right can be very important. If we know that what we are doing might affect someone's health and safety, then we need to make sure that the numbers are exact.

But sometimes it is not so important and we can estimate. We can guess a number close to the exact number.

A good estimate can save time and money.

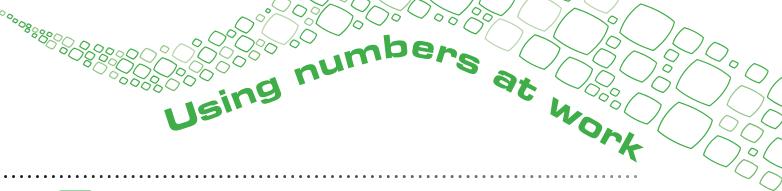

Number ranges put similar things into a group:

- · all the temperatures at which food is not safe
- · all the healthy weights for a person of this height

Services for children often put children of about the same age in a group (e.g. 3-5 year olds). Grouping children into age ranges makes it easier to plan activities and to make sure there are enough carers for each group.

For some tasks, we have to use exact numbers. For other tasks, we can estimate numbers.

Write the best word for each job shown below - exact or estimate.

| Make an appointment. | exact | | | | |
|---|-------------|--|--|--|--|
| Get more paper for the printer. | extimate | | | | |
| Fill in your time sheet. | | | | | |
| Get supplies for your clinic. | | | | | |
| Write down the weight of a baby. | | | | | |
| Write down a person's pulse rate. | | | | | |
| Write down the time the medication was taken. | | | | | |
| Put condoms in the Well Men's Clinic basket. | | | | | |
| Get chairs ready for the Mums and But | os session. | | | | |

Dosage

Your baby weighs 5 kg. What is:

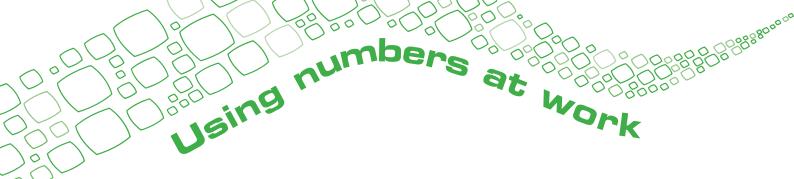

| Age | Average weight | Dose |
|---------------|----------------|--------------|
| 1 - 3 Months | 4.2 - 6.0 kg | 0.6 - 0.9 mL |
| 3 - 6 Months | 6.0 - 7.8 kg | 0.9 - 1.2 mL |
| 6 - 12 Months | 7.8 - 10.2 kg | 1.2 - 1.5 mL |
| 1 - 2 Years | 10.2 - 12.6 kg | 1.5 - 1.9 mL |

The smallest dose of medicine you can give him?

The biggest dose of medicine you can give him?

Tom estimated the weight of a dog. He checked his guess by measuring the dog's weight on the scales.

Which of these is most likely the exact measure of the dog's weight? Place a tick next to the right answer.

| about 10 kilograms | 9.5 kg | medium size |
|--------------------|--------|-------------|
|--------------------|--------|-------------|

Mary needs to replace a flyscreen. She estimated the length of the window and then measured it using a tape measure.

Which of these is most likely the estimate of the window length? Place a tick next to the right answer.

| 105 cm | about a metre | 1.05m |
|--------|---------------|-------|
| 1 | | |

We can use different instruments to measure exact numbers. Draw a line to match the job to the instrument you might use.

| Measure a new piece of pipe for plumbing repairs. | ONGITAL - THE MODITOR OF THE POST OF THE P |
|---|--|
| Check water temperatures in houses. | |
| Measure how much drug to give a dog. | |
| Write down the time a water sample was taken. | 7.00ml -2.3ml -50ml -75ml |
| Measure the right amount of pesticide. | |

Write

Use the chart above to work out the safe dose of medicine for each child. Write your answer in the dose column. The first one has been done for you.

| Age | Average Weight | Dose |
|--------------|----------------|--------------|
| 2 Months | 5 kg | 0.6 - 0.9 mL |
| 10 Months | 9.6 kg | mL |
| 4 Months | 6.8 kg | mL |
| 1 1/2Years | 11 kg | mL |
| 8 1/2 Months | 10 kg | mL |

You are taking these children to a local play group. The play group is split into three areas – the babies (0-18 months), the toddlers (18 months-3 years) and the pre-schoolers (3-5 years).

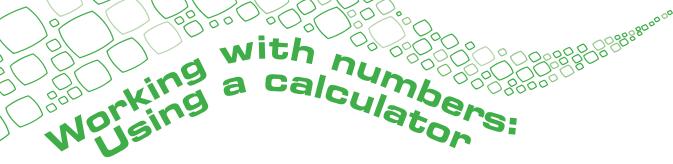

Which group should each child join?

| Emma | 5 months | Ben | 2 years | Tina | 4 years |
|-------|-------------|-----|-----------|-------|-------------|
| Chris | 4 years | Kim | 18 months | Sally | 2 3/4 years |
| Zeb | 2 1/4 years | Tom | 5 years | Amy | 11 months |

| Babies | Toddlers | Pre-schoolers |
|-------------|--------------------|---------------|
| 0 -18months | 18 months - 3years | 3 - 5 years |
| Amy | Ben | Chris |
| Emma | Sally | Tom |
| Kim | Zeb | Tina |

Watch - Observe

When do you see people working with numbers or doing sums? When do you see people using a calculator? Find a calculator in your workplace.

When do we use it? Context

In the workplace, we do sums when we work out:

- how much pesticide to use
- how many supplies we will need.

Sometimes you work the sum out 'in your head'. Ask yourself:

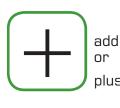

- What is the unit (e.g. millilitres)?
- Do I add, subtract, multiply or divide?
- Does the answer make sense?

Sometimes you can use a calculator to help you work with numbers, but first you need to have a good idea of what the answer is.

When you have finished working something out on a calculator, always ask yourself, 'Does the answer make sense?'

Calculators can help you to:

plus

subtract, minus or take away

divide by or share equally

with numbers a calculators:

Copy the words into the right place on the table.

| divide by, share equally | times, multiply |
|---------------------------|-------------------|
| plus, add, add up, total | equals, makes, is |
| minus, take away, subract | decimal point |

| Symbol | Words for the symbol |
|--------|----------------------|
| + | |
| - | |
| X | |
| = | |
| ÷ | |
| | |

Think about - Reflect

Think about when you have to use numbers at work.

When do you add up to get a total amount?

When do you take away?

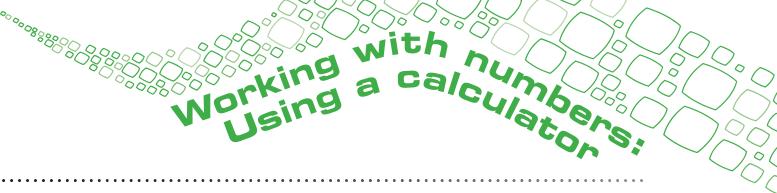

When do you multiply (times)?

When do you divide?

Find a calculator, and turn it on. Write the number you can see:

Read

The dose of a drug is 15 mg/kg every 4 hours. To work out how much to give you have to:

- weigh the patient
- write down the weight in kilograms (kg)
- multiply (x) the weight by 15. The answer is how many milligrams (mg) of medicine to give.

Tom weighs 21 kg. To work out his dose, on the calculator, press 21x15= Answer on screen: 315

| 2 | 1 | Х | 1 | 5 | = | 315 |
|---|---|---|---|---|---|-----|
|---|---|---|---|---|---|-----|

This means Tom can have no more than 315 mg every 4 hours.

Fill in

Fill in the keys you press to find the dose for: Jack, who weighs 10 kg. (Remember you have to multiply (x) the weight by 15)

| | х | | = |
|--|---|------|---|
| | | | |

Answer on screen

Ann, who weighs 31 kg.

Answer on screen

Peter, who weighs 4.5 kg.

Answer on screen

with hold a calculators:

Draw a line to match the term with the right symbol.

| divide by, share equally | 0/0 |
|----------------------------|-----|
| equals, makes, is | + |
| plus, add, add up, total | - |
| minus, take away, subtract | x |
| times, multiply | = |
| decimal point | ÷ |
| percent | |

Find a calculator and turn it on. Write the number you can see:

CPress the 'clear' button. You are now ready to start.

Watch - Observe

When Wonem Art Centre sells a painting, the art centre takes 40% of the money and the artist gets 60%.

To work out how much money the artist would get if a painting sold for \$1000. on the calculator, press $1000 \times 60\%$

Answer on screen: 600 This means the artist gets \$600.

For each painting sold, fill in the keys you press on the calculator to find out the amount of money the artist gets.

If 44 people are at the AGM, fill in the keys you press on the calculator to find out the number of people that need to vote YES.

Answer on screen

Word list

a.m. = morning (before 12 midday).

p.m. = afternoon and evening (after 12 midday).

analog clock = clock with hands that move around a circle.

digital clock = clock that shows numbers and if it is a.m. or p.m.

Watch - Observe

Look at different watches and clocks in your workplace. Do they show the numbers in different ways?

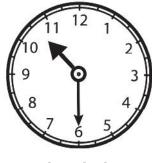

Vhen do we use it? Context

In the workplace we use clocks and watches when we write down:

- the time we start work
- the time we finish work
- appointment times.

There are two different sorts of clocks and watches:

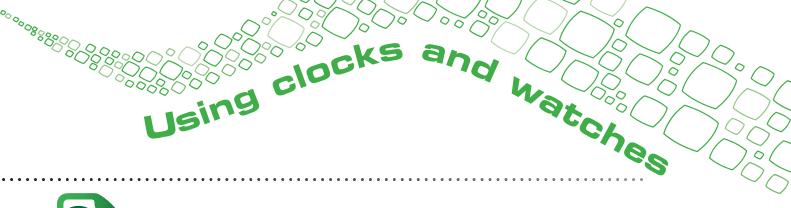

digital clock

Before there were clocks, people used the sun to help them keep track of time during the day – like we still do today. People also used candles and sand to measure time, by knowing how long it took the candle to burn down, or by knowing how long it took sand to fall through a hole (as in an egg timer).

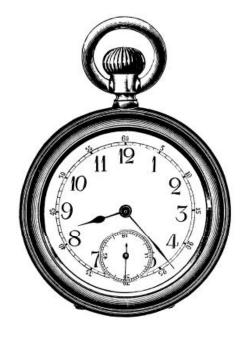

For many tasks in the workplace, it is important to check the time carefully. For example:

- The meeting will start in 15 minutes.
- Please take Mr White's pulse for one minute.

We have to keep some records for legal reasons. We often use digital clocks when it is important to record an exact time – such as on time sheets or when a baby is born.

Being exact about time is not always that important. You might tell your family that dinner will be ready by 6.30 p.m. But does it matter much if it is a few minutes late or early?

The 24 Hour clock

Watch - Observe

Do people in your workplace

- · read or check the time?
- write using the 24 hour clock?

When do we use it? Context

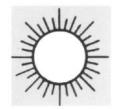

In some workplaces (such as health centres and hospitals), people write the time using the 24 hour clock.

One day and night has 24 hours in it.

| Analog clock | | 24 hour clock |
|----------------------------------|--------|---------------|
| 11 12 1 9 0 3 8 4 4 6.00am | July 1 | 0600 hours |

12.00 midday

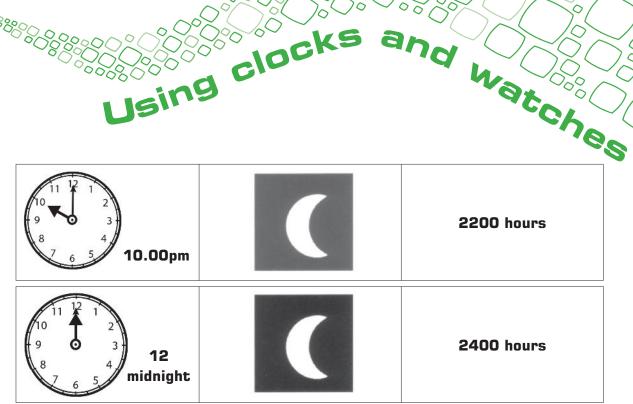

1200 hours

0,(

When we use the 24 hour clock we don't use the same numbers twice. In the afternoon we add the hours and minutes on to 12 (because midday = 12 hours). So the time is written like this:

| 12 hour clock (analog or digital) | 24 hour clock |
|-----------------------------------|--|
| 9 o'clock in the morning | 0900 hours |
| 11.45 a.m. | 1145 hours |
| 4 o'clock in the afternoon | 1600 hours (12 + 4 hours) |
| 10.20 p.m. | 2220 hours (12 + 10 hours and 20 minutes) |

People use the 24 hour clock when it is really important to get the exact time. If you use the 24 hour clock you won't get mixed up between morning times and afternoon times.

0008880000

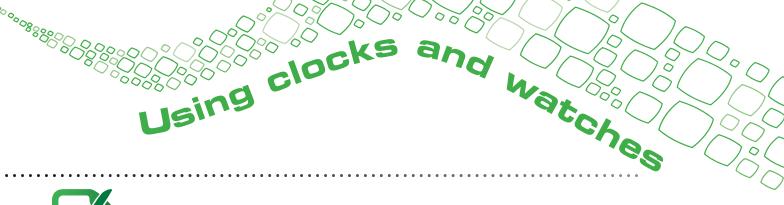

Watch - Observe

Fill in the gaps in the table.

| Analog form | Digital form | Draw the hands on the clock |
|----------------|--------------|---|
| 9 o'clock | 9:00 | $ \begin{array}{c cccc} \hline 0 & 11 & 12 & 1 \\ 0 & & & & & \\ 2 & & & & & & \\ 7 & 6 & 5 & & & \\ 7 & 6 & 5 & & & \\ \end{array} $ |
| 6 o'clock | | 11 12 1 10 2 9 3 3 8 4 7 6 5 |
| Half past 8 | | 11 12 1 10 2 9 3 3 8 4 7 6 5 |
| | | $ \begin{array}{cccccccccccccccccccccccccccccccccccc$ |
| | 5.15 | $ \begin{array}{cccccccccccccccccccccccccccccccccccc$ |
| Quarter to ten | | $ \begin{array}{cccccccccccccccccccccccccccccccccccc$ |
| ten to 8 | | 11 12 1 10 2 9 © 3 8 7 6 5 |
| | 7.05 | 11 12 1 10 2 9 © 3 8 4 7 6 5 |

When you look at a meeting time, it is important to know whether the meeting is in the morning or afternoon. The letters 'a.m.' or 'p.m.' tell you this.

| my my | a.m. = before midday |
|---------|---|
| | Noon = middle of the day (12 o'clock) |
| Thirtie | p.m. = after midday |
| | Midnight = middle of the night (12 o'clock) |

Fill in the times on this table and write whether they are a.m. or p.m.

| | How would you write this time? |
|-----------------------------------|--------------------------------|
| ten o'clock in the morning | 10:00 a.m. |
| five twenty five in the afternoon | |
| fifteen minutes after noon | |
| ten minutes before noon | |
| half past three in the afternoon | |
| twenty to twelve in the morning | |

Before taking a water sample you let the water flow for 1-2 minutes. Work with a colleague or your support person. Find a watch with a second hand. Estimate (guess) how long 1 minute is. Ask a colleague to use the watch to measure how close to 1 minute your estimate is.

Work with your trainer

Read this story:

An antibiotic drip is started at 0800 hours and will go through in 8 hours.

What time will the drip go through?

Answer: The drip will go through and finish at 1600 hours.

There are lots of ways of working this out. Talk about them with your trainer. Some things you need to think about are:

| 1. Will the drip finish in the morning or | It will be in the afternoon, because |
|---|---|
| the afternoon? | there are only 4 hours until the end of |
| | the morning (midday). |
| 2. Count 8 hours from 0800 hours. | 0800 hours + 8 hours = 1600 hours |
| | (4pm) |

Practise - Do

Try the following:

- 1. An antibiotic drip is started at 0900 hours and will go through in 4 hours. What time will the drip go through?
- 2. An antibiotic drip is started at 1030 hours and will go through in 8 hours. What time will the drip go through?

 \bigcirc

Write

You can work out the 24 hour time by using your watch to count on from 12 noon. So if it is 2 o'clock in the afternoon you count 13 instead of 1 and 14 instead of 2. So you know it is 1400 hours.

| Clock face | am or pm time | 24 hour time | What things am I doing at this time of day? |
|--|------------------|--------------|---|
| 10 12 1 29 3 8 7 6 5 am | 8am | | |
| 11 12 1 10 1 2 9 3 3 8 4 7 6 5 | | 0900 | |
| 11 12 1 10 2 9 3 3 8 7 6 5 am | 10.30 am | | |
| 9 3 3 8 4 7 6 5 pm | | 1300 | |
| 9 3 3 8 7 5 pm | 5.30 pm | | |
| 9 © 3 8 4 7 6 5 | | 2200 | |

Practise saying these times:

| 0910 hours | = | oh nine ten hours |
|------------|---|----------------------|
| 1340 hours | = | thirteen forty hours |
| 1245 hours | = | |
| 1620 hours | = | |
| 0805 hours | = | |
| 1930 hours | = | |

Say and write the times when you:

| arrive at work | = | |
|-----------------------|---|--|
| see your first client | = | |
| have lunch | = | |
| go home | = | |

Fill in these tablets to show:

- · when Anna needs Amoxil, and
- · when Steven needs his pulse checked

| Anna needs Amoxil every 2 hours | | Steven needs his pulse checked every 4 hours | |
|---------------------------------|------------|--|------------|
| 6 am | 0600 hours | 9am | 0900 hours |
| 8 am | | | |
| | | | |
| | | | |
| | | | |

| where | 2000 hours | 8 o'clock p.m. |
| Shark | 2100 hours | 9 o'clock p.m. |
| | 2200 hours | 10 o'clock p.m. |
| | 2300 hours | 11 o'clock p.m. |
| | 2400 hours | 12 midnight |

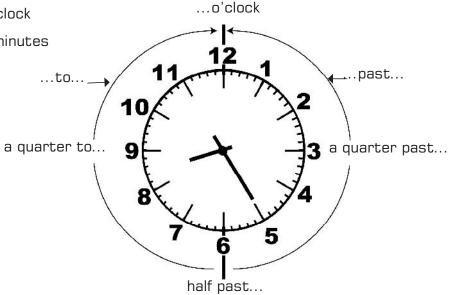

1 minute = 60 seconds

The seconds hand is the fastest.

Telling the time

Short (hour) hand = o'clock

Long (minute) hand = minutes

1 hour =

15 minutes (quarter past)

- +15 minutes (half past)
- + 15 minutes (quarter to)
- + 15 minutes (o'clock)

1 hour =

30 minutes (half past) +

30 minutes (o'clock)

5 minutes (5 past) + 5 minutes (10 past) + 5 minutes (quarter past)...

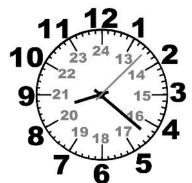

5 minutes (5 to).

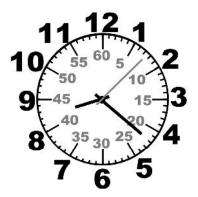

Jeing clocks and watches

Hours and minutes

- 1 day = 24 hours (the short hand shows the hour)
- 1 hour = 60 minutes (the long hand shows the minutes)

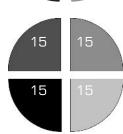

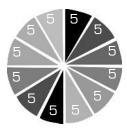

1 mark on the clock = 1 minute

1 hour = 30 minutes + 30 minutes (60 minutes)

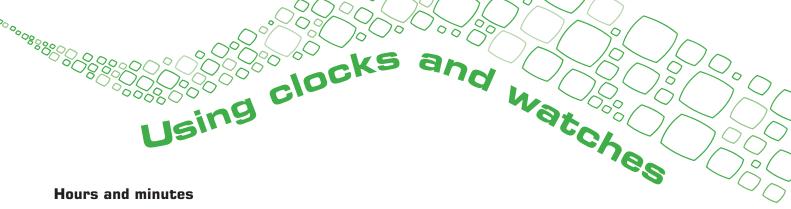

1 hour = 15 + 15 + 15 + 15 (60 minutes)

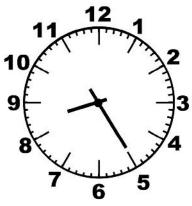

- 1 day = 24 hours
- 1 hour = 60 minutes
- 1 minute = 60 seconds
